

MATERIAL HANDLING WINCH SYSTEM

Operator feeds bar guide and winch wire through cradle carrier guide.

Operator places end of coiled bar into bar guide...

...then secures with set screws.

The KRB Winch System makes it easy for one man to load an automatic stirrup bender. The winch pulls coiled rebar up to the machine making it easier and safer for one man to load.

Save time on change over and reduce operator fatigue by installing a KRB Winch System on your Automatic Stirrup Bender today. To see more, visit <http://www.krbmachinery.com/winch.html>.

Winch pulls bar toward machine.

Operator uses optional hand-held straightener to straighten end of bar while winch holds bar in place. Then operator guides bar into the machine.
